

The latest technology in air conditioning control 

 **BONAIRE**[®]
The leaders in heating and cooling

My Climate[®]

Available only through Bonaire specialists, Bonaire's My Climate[®] control allows you to control your Bonaire ducted gas heater, ducted evaporative cooler or York dual cycle refrigerated air conditioner from your Smart Device.

Compatible with both iPhone and Android™ devices, once you have purchased and installed the My Climate interface kit and downloaded the app, My Climate allows you to control your ducted system utilising your existing home Wi-Fi[®] network, or remotely through your mobile network. Remote Access enables you to turn on your system when you are at work or out so you can return home to comfort. With Bonaire My Climate you can turn on and off your unit, adjust temperature or comfort settings, turn on and off your system's zones (if fitted) and fully programme your system to suit your requirements.

Compatibility

New Air conditioners

You will need to purchase a MyClimate interface kit and also have a Navigator[®] hard wired or wireless remote control installed with your Bonaire system. This kit can be fitted to all new Bonaire ducted gas, evaporative and York dual cycle air conditioners as the time of installation. Contact your Bonaire Specialist Dealer for details on pricing and the installation process.

Existing Air conditioners

The My Climate interface kit is also potentially Wi-Fi compatible with existing Bonaire unit installations that have a Navigator hard wired or wireless remote control installed. Your Bonaire Specialist dealer can assess your system and, if compatible, install Bonaire My Climate into your home. Contact your Bonaire Specialist Dealer for details on pricing and the installation process.

Zoning

For zone control functionality your Bonaire system must be fitted with a Bonaire Navigator hard wired or wireless remote control and associated zone control dampers.* Bonaire My Climate allows you to monitor and control each zone with a simple tap. You can even name each zone, tailoring the zones to your house layout.

Install the App

The Bonaire My Climate App is available for download, free on the App Store (iPhone) or on Google Play (Android). Download and install the app as you would any other app.

Future app updates will be available for free.

How to Connect

Wi-Fi Connection

If you have a home or local Wi-Fi network, your Bonaire My Climate enabled system can be joined to your network by entering your network credentials in the Wi-Fi control app. Once connected to your Wi-Fi network, you can control your air conditioner from any networked Android device or iPhone.

Remote Access

If your Wi-Fi network has a permanent internet connection then you can control your Bonaire system from anywhere your

smartphone can connect to the internet. Remote Access allows you to control your system from virtually anywhere. You can turn your unit on or off and adjust your temperature settings so that you return home to a comfortable environment. Bonaire My Climate Remote Access also comes with a "one hour to get home" turn off function that will automatically switch off your Bonaire system if you accidentally switch on your system remotely.

*Individual zone dampers supplied and installed by air-conditioning retailer at additional cost
